IN THE CLAIMS

Please amend claims 16 and 21-27 as follows below.

- 1 1. (Original) A hand held hair dryer with automatic air
- 2 movement, the hand held dryer comprising:
- 3 a housing;
- 4 a fan to generate an air flow in the housing;
- 5 a propeller with a propeller shaft aligned with the fan to
- 6 receive the air flow;
- 7 a nozzle pivotally mounted in the housing; and
- 8 a plurality of gears between the nozzle and the propeller
- 9 shaft, the plurality of gears to pivot the nozzle to redirect the
- 10 air flow out from the hand held hair dryer in response to rotation
- 11 of the propeller.
- 1 2. (Original) The hand held hair dryer of claim 1, wherein
- 2 the housing, the propeller, the nozzle, and the plurality of
- 3 gears are integrated together as an attachment.
- 1 3. (Original) The hand held hair dryer of claim 2, wherein
- 2 the hand held hair dryer is a standard hair dryer and the
- 3 attachment is a universal attachment, and
- 4 the hand held hair dryer further comprises:

78781P036 Page 5 WEA/phs

- 5 a flexible boot coupled to the housing at one end, the
- flexible boot to flexibly couple to a body of the standard
- 7 hair dryer.
- 1 4. (Original) The hand held hair dryer of claim 1, further
- 2 comprising:
- an electric heater between the fan and the propeller, the
- 4 electric heater to heat the air flow in the housing.
- 1 5. (Original) The hand held hair dryer of claim 1, wherein
- the housing is rotatable to rotate a plane of the air flow.
- 1 6. (Original) The hand held hair dryer of claim 1, wherein
- 2 the air flow is redirected out from the hand held hair dryer
- 3 without restriction.
- 1 7. (Original) The hand held hair dryer of claim 1, wherein
- 2 gear reduction provided by the plurality of gears pivots the
- 3 nozzle back and forth in a plane.
- 1 8. (Original) The hand held hair dryer of claim 1, further
- 2 comprising:
- 3 a pivot shaft coupled to the nozzle;
- 4 a linkage arm having a first end rotatably coupled to a crank
- 5 gear of the plurality of gears, the linkage arm to convert

78781P036 Page 6 WEA/phs

- 6 rotational motion of the crank gear into linear motion of the
- 7 linkage arm; and
- 8 a drive arm having a first end rotatably coupled to a second
- 9 end of the linkage arm and a second end affixed to the pivot
- 10 shaft, the drive arm to convert linear motion of the linkage arm
- 11 into pivotal motion of the pivot shaft and the nozzle.
- 9. (Original) The hand held hair dryer of claim 8, wherein
- 2 the housing includes
- a retaining collar having a pair of bushings, the pivot
- 4 shaft having ends pivotally coupled to the pair of bushings.
- 1 10. (Original) The hand held hair dryer of claim 8, wherein
- 2 the housing includes
- an intake sleeve having a first opening at a first end
- 4 to receive the air flow and a second opening at a second end
- 5 to direct the air flow into the nozzle, the propeller
- 6 supported within the intake sleeve aligned with the intake
- 7 opening to receive the air flow.
- 1 11. (Original) A hair dryer attachment comprising:
- 2 a housing with a first opening to couple to an end of a hair
- 3 dryer;
- 4 a propeller aligned with the first opening of the housing to
- 5 receive air flow from the end of the hair dryer, the propeller
- 6 coupled to a propeller shaft;

78781P036 Page 7 WEA/phs

- 7 a nozzle pivotally mounted in the housing; and
- 8 a gear stack coupled between the nozzle and the propeller
- 9 shaft, the gear stack to pivot the nozzle in response to rotation
- 10 of the propeller.
- 1 12. (Original) The hair dryer attachment of claim 11, further
- 2 comprising:
- 3 a pivot shaft coupled to the nozzle, the pivot shaft
- 4 pivotally coupled to the housing,
- 5 a linkage arm rotatably coupled to a final gear of the
- 6 gearing at a first end,
- 7 a drive arm having one end coupled to the pivot shaft and
- 8 another end rotatably coupled to a second end of the linkage arm,
- 9 wherein the linkage arm translates rotational motion of the
- 10 final gear into linear motion, and
- 11 wherein the drive arm translates the linear motion of the
- 12 linkage arm into pivotal motion of the pivot shaft and the nozzle
- 13 coupled thereto.
- 1 13. (Original) The hair dryer attachment of claim 11, wherein
- 2 the gear stack repeatedly pivots the nozzle back and forth so
- 3 that it automatically oscillates the air flow over a users head.
- 1 14. (Original) The hair dryer attachment of claim 11, further
- 2 comprising:

78781P036 Page 8 WEA/phs

- a flexible boot coupled to the housing at one end, the
 flexible boot having a second end to flexibly couple to a
- 5 body of the standard hair dryer.

electric hair dryers.

- 1 15. (Original) The hair dryer attachment of claim 14, wherein
 2 the hair dryer attachment is a universal hair dryer
 3 attachment to couple to a plurality of models of hand held
- 1 16. (Currently Amended) A method of automatic air flow
- 2 movement for a hand held hair dryer, the method comprising:
- 3 generating an air flow within a housing of a hand held hair
- 4 dryer using a motorized fan;

4

- directing the air flow within the housing of the hand held
- 6 <u>hair dryer</u> at a propeller to rotate the propeller and a propeller
- 7 shaft coupled to the propeller;
- 8 <u>further</u> directing the air flow <u>within the housing of the hand</u>
- 9 held hair dryer into a nozzle;
- 10 converting rotational motion of the propeller shaft into a
- 11 repetitive pivotal motion of the nozzle; and
- oscillating the air flow out from the nozzle by repetitively
- 13 pivoting the nozzle in response to the rotational motion of the
- 14 propeller shaft.
- 1 17. (Original) The method of claim 16, wherein

78781P036 Page 9 WEA/phs

- 2 the converting of rotational motion of the propeller shaft
- 3 into the repetitive pivotal motion of the nozzle includes
- 4 gearing down the rotational motion of the propeller
- 5 shaft;
- 6 converting the rotational motion into a repetitive
- 7 linear motion; and
- 8 converting the repetitive linear motion into the
- 9 repetitive pivotal motion.
- 1 18. (Original) The method of claim 16, further comprises:
- 2 heating the air flow with an electric heater prior to
- 3 directing the air flow at a propeller.
- 1 19. (Original) The method of claim 16, further comprises:
- rotating the nozzle to a different position to oscillate the
- 3 air flow in a different plane than a first plane of air flow
- 4 oscillation.
- 1 20. (Original) The method of claim 16, wherein
- 2 a pivot shaft is coupled to the nozzle.
- 1 21. (Currently Amended) A universal nozzle attachment for a
- 2 hair dryer comprising:
- 3 an oscillating nozzle to redirect air flow received from the
- 4 hair dryer;

78781P036 Page 10 WEA/phs

- 5 a collar to pivotally support the oscillating nozzle, the
- 6 oscillating nozzle pivotally mounted to the collar in an opening
- 7 thereof;
- 8 a hollow flexible rubber boot having a first opening at a
- 9 first end to couple to a barrel of the hair dryer and a second
- 10 opening at a second end to couple to the collar;
- 11 a bracket coupled to the collar;
- 12 a propeller aligned in the center of the first opening of the
- 13 boot, the propeller coupled to a propeller shaft supported by the
- 14 bracket; and
- 15 a gear stack supported by the bracket, the gear stack between
- 16 the oscillating nozzle and the propeller shaft to convert a
- 17 rotational motion in the propeller shaft into a pivotal motion of
- 18 the oscillating nozzle.
- 1 22. (Currently Amended) The universal nozzle attachment of
- 2 claim 21, wherein
- 3 the oscillating nozzle is a hollow spherical shape with
- 4 openings at opposite sides.
- 1 23. (Currently Amended) The universal nozzle attachment of
- 2 claim 21, wherein
- 3 the oscillating nozzle is a hollow cylindrical shape with
- 4 openings at opposite sides.

78781P036 Page 11 WEA/phs

- 1 24. (Currently Amended) The universal nozzle attachment of
- 2 claim 21, wherein
- 3 the oscillating nozzle has a pivot shaft parallel with a
- 4 center line, the pivot shaft having ends protruding from the
- 5 oscillating nozzle to pivotally couple into bushings of the
- 6 collar.
- 1 25. (Currently Amended) The universal nozzle attachment of
- 2 claim 21, wherein
- 3 the universal nozzle attachment is coupled to the hair dryer,
- 4 and
- 5 the oscillating nozzle automatically swivels in response to
- 6 air flow being generated by the hair dryer.
- 1 26. (Currently Amended) The universal nozzle attachment of
- 2 claim 21, wherein
- 3 the gear stack includes
- 4 a plurality of gears between the oscillating nozzle and
- 5 the propeller shaft to convert the rotational motion of the
- 6 propeller shaft into the pivotal motion of the oscillating
- 7 nozzle.
- 1 27. (Currently Amended) The universal nozzle attachment of
- 2 claim 26, wherein
- 3 the gear stack further includes

78781P036 Page 12 WEA/phs

| 4 | a linkage arm coupled to one of the plurality of gears |
|---|--|
| 5 | to convert the rotational motion of the propeller shaft into |
| 5 | a linear motion, and |
| 7 | a drive arm coupled between the linkage arm and the |
| 3 | oscillating nozzle to convert the linear motion into the |
| 9 | pivotal motion of the oscillating nozzle. |
